

Please contact sigma.usyd@gmail.com for your application of RA and PhD/Mphil position. Otherwise, we may not reply.

About RA:

If you are the first author for at least on top-tier conference paper like CVPR, ICCV/ECCV, NIPS or journal like TPAM, IJCV, or TIP, or if you can self-fund your position here, then please contact us.

About Master by research or PhD:

1. My research is on computer vision and deep learning. This is an area you are not familiar with. This means that you need to spend more time on it than others when you come.

2. My group ONLY target paper on top-tier conferences like CVPR, ICCV or journals like TPAMI, IJCV or TIP. If one's first-authored paper is accepted, I will try my best to let him attend the conference with financial support.

3. To graduate in my group, PhD students normally 1) publish three first authored top-tier papers; or 2) has citation for the first authored papers published after joining our lab being more than 100

4. Students in my group are not only intelligent, but also diligent. They often stay in the lab more than 12 hours per day and often come to the lab at weekends (note that it is not required by our lab or university to do so). So students are under high pressure to do top-tier research. I strongly recommend students not to apply for my group if they are not prepared to work very hard.

Information on PhD Scholarship:

In this university, I cannot decide who will be granted with scholarship. There is a committee for granting the scholarship. You do have good academic records and there is good probability for you to obtain the scholarship.

Information on self-funded PhD:

If students are willing to be self-funded, the tuition fee for our university is very high, ~43,000 AUD (Australian Dollar) per year. And the cost for living will be ~20,000 AUD per year.
